

# Week 1: Self-assessment for a *career* in Bioengineering

- Every week, an expert will show us **what** bioengineering is.
- Our “30 min” blocks are about **how you build a career in it**

## BTW... you regularly Google your own name

<https://www.forbes.com/sites/courtney-conley-hampton/2020/05/12/what-recruiters-look-for-when-they-google-your-name/>

<https://www.macslis.org/networking/employers-see-google-name>

## don't you????

**“Your online footprint is not just proof that you exist. It becomes part of how people, and now **machines**, decide whether you make sense.”**

## **BTW... you already have and maintain a**

- LinkedIn profile (not a unmaintained profile!)
- GitHub profile (with your projects portfolio)
- A personal landing page (with CV, projects, interests, links)  
see e.g. GitHub pages, about.me,...
- ORCID iD (if leaning toward research)
- Google Scholar profile (if leaning toward research)

**don't you????**

## **First “fork”** (to reflect upon)

### **Research**

Generate new knowledge

OR

### **Applied**

Build, regulate, fund, communicate...  
something that already exists

# Second “fork”

(to reflect upon)

## Research

### Basic

e.g. Bench-oriented, fundamental questions

### Translational / clinical

e.g. Patient- or market-oriented

## Applied

### Technical

e.g. Device R&D, clinical engineering

### Non-technical

e.g. Regulatory, tech transfer, policy, consulting

Entrepreneurship cuts across both branches.

# Examples

### RESEARCH · BASIC

Translational lab PI

### RESEARCH · CLINICAL

Notified-body device reviewer

### APPLIED · TECHNICAL

Field applications engineer

### APPLIED · TECHNICAL

Technical scout at a Venture Capitalist fund

### APPLIED · NON-TECHNICAL

Science policy advisor

### ENTREPRENEURSHIP

Medtech startup founder

# To DO later (during the weekend)

## Career Profiler

[mgiugliano.github.io/colloquia/careers.html](https://mgiugliano.github.io/colloquia/careers.html)

### Colloquia in Bioengineering

#### CAREER PROFILE

For each question, select the single option that best mirror your natural instinct and preferences in bioengineering. Once you answer all questions, you can generate a career profile that may serve as a starting point for a discussion. It is NOT at all "written in stone" and has no guarantee of correctness or completeness.

#### 1. Which phase of the medical device lifecycle excites you the most?

Validating the device efficacy in a clinical setting.

Navigating FDA/CE approvals and standardizing quality.

Designing predictive algorithms and processing data.

Designing the user interface and optimizing ergonomics.

## Profile generated

Based on your responses, here is your alignment with these 6 core bioengineering career tracks.

**Hybrid Profile Detected:** Clinical & Translational Bioengineering & Medical Device Usability/Interfacing and Ergonomics. Your top traits are closely matched.

Helpful to get ideas and questions, not answers!

# To DO now! (5 min, write it down!)

## Your own career in Bioengineering

- What do you gravitate toward?** When working on a project, what part do you find yourself drawn to without being asked?
  - the *why* (the underlying question),
  - the *how* (building or making it work),
  - the so *what* (judging whether it's good, safe, or valid),
  - or the *who cares* (explaining it, selling it, convincing someone)
- Autonomy or stability?** Right now, which matters more to you:
  - setting your own agenda and having intellectual freedom,
  - or having a stable income, institution, and predictable path?
- Contributor or manager?** Five years from now, do you picture yourself
  - managing people and projects,
  - or do you want to stay an individual technical contributor for as long as possible?
- One in, one out.** Name
  - one career path that you'd like to know more about. Why?
  - and one you're now fairly confident is *not* for you. Why?

# 5:00

### Work alone!

Work alone for 5 minutes

### This is not a exam!

Nobody collects what you wrote.

### Keep it, save it.

You'll use it again.

**Now with a partner (2 + 2 min)**

**4:00**

**Compare, don't *converge***

Tell each other **what** you wrote and **why**.  
There is no need to agree!

**Now... let's "study" our Guest**

As today's Speaker talks: **which fork** did they take? Where did they **diverge** from the **s**?

Keep it. Next week, it becomes your professional **pitch**.  
At the end of the term, it becomes your development plan.
